CHARACTERISTICS OF CHILDREN IN THE SOUTHERN REGIONS**

**ORGANIZES ON DECEMBRE 06/07, 2022 THE 3RD
NATIONAL FORUM ON :**

Sports And Anthropometry

PROBLEM

Many authors have looked into the influence of different morphological parameters on the specific tasks of different sports, whether in adults or children, in order to determine the influence of sports practices on the morphology of the athlete and determine the morphotypes by sports specialty. But very few studies have been conducted on the human type in Algeria and even less on the child.

So through this National Science Forum we invite all researchers, experts and specialists in the field to enrich the subject and respond to the concerns of STAPS students.

- Axe I : The child and physical activity
- Axe II : Body composition and weight-class sports
- Axe III : Biological development of the child of the South
- Axe IV: Typology of top athletes
- Axe V: Strength training for children
- Axe VI: Physical preparation of athletes under the biological aspect.
